

IN THE CLAIMS:

The text of all pending claims, (including withdrawn claims) is set forth below. Cancelled and not entered claims are indicated with claim number and status only. The claims as listed below show added text with underlining and deleted text with ~~strikethrough~~. The status of each claim is indicated with one of (original), (currently amended), (cancelled), (withdrawn), (new), (previously presented), or (not entered).

Please CANCEL claims 2, 7-14 and 20, AMEND claims 1, 3-6 and 15-19 and ADD new claims 21-26 in accordance with the following:

1. (currently amended) An ~~information-terminal-equipment~~ apparatus comprising:
a managing part ~~managing~~ configured to manage functions and/or information in a manner linked to a plurality of using situations;

a switch ~~setting~~ configured to set a using situation to a business mode for business use or a private mode for personal use; and

a control part configured to automatically ~~selecting~~ select a function and/or information from the managing part depending on the using situation set by the switch, and ~~making~~ to make the selected function and/or information usable by a user.

2. (cancelled)

3. (currently amended) The ~~information-terminal-equipment~~ apparatus as claimed in claim 1, wherein said control part determines an accounting destination depending on whether the using situation is ~~a~~ the business mode or ~~a~~ the private mode.

4. (currently amended) The ~~information-terminal-equipment~~ apparatus as claimed in claim 1, further comprising:

a display part,

said control part displaying the automatically selected function and/or information on the display part in a manner usable by the user.

5. (currently amended) The ~~information-terminal-equipment~~ apparatus as claimed in claim 1, wherein said managing part manages the linked functions and/or information as a database, and automatically adds to the database data which depend on the using situation and are not included in the database.

6. (currently amended) An ~~information terminal equipment~~ apparatus comprising:

a managing part ~~managing~~ configured to manage functions and/or information in a manner linked to a plurality of using situations;

a detector ~~detecting~~ configured to detect a using situation based on information selected from at least one of an electronic mail address received from another party, an electronic mail address transmitted to another party, position information indicating a position of the apparatus, and mode information indicating an operation mode of the apparatus; and

a control part configured to automatically selecting ~~select~~ a function and/or information from the managing part depending on the using situation detected by the detector, and ~~making~~ to make the selected function and/or information usable by a user.

Claims 7-14. (canceled)

15. (currently amended) The ~~information terminal equipment~~ apparatus as claimed in claim 6, wherein said control part determines an accounting destination depending on whether the using situation is a business mode for business use or a private mode for personal use.

16. (currently amended) The ~~information terminal equipment~~ apparatus as claimed in claim 6, further comprising:

a display part,

said control part displaying the automatically selected function and/or information on the display part in a manner usable by the user.

17. (currently amended) The ~~information terminal equipment~~ apparatus as claimed in claim 6, wherein said managing part manages the linked functions and/or information as a database, and automatically adds to the database data which depend on the using situation and are not included in the database.

18. (currently amended) A computer-readable storage medium which stores a program for causing a computer to operate as information terminal equipment, said program comprising:

managing ~~means for causing a computer to manage~~ functions and/or information in a manner linked to a plurality of using situations; and

~~control means for causing the computer to automatically select~~ selecting a function and/or information ~~from~~ managed by the managing means depending on a using situation ~~set~~ related to business use or personal use as identified by a switch, and to make making the selected function and/or information usable by a user.

19. (currently amended) A computer-readable storage medium which stores a program for causing a computer to operate as information terminal equipment, said program comprising:

managing means ~~for causing a computer to manage~~ functions and/or information in a manner linked to a plurality of using situations;

detecting means ~~for causing the computer to detect~~ a using situation based on information selected from a group consisting of an electronic mail address received from another party, an electronic mail address transmitted to another party, position information indicating a position of the information terminal equipment, and mode information indicating an operation mode of the information terminal equipment; and

~~control means for causing the computer to automatically select~~ selecting a function and/or information ~~from~~ managed by the managing means depending on the using situation detected by the detecting means, and ~~to make~~ making the selected function and/or information usable by a user.

20. (canceled)

21. (new) An apparatus comprising:

a managing unit managing at least one of functions and information based on using situations;

a timer tracking time of day;

a switch indicating one of a business mode for business use and a private mode for personal use based on the time of day; and

a control unit automatically selecting at least one of a function and information from the managing unit depending on the using situation, and making the at least one of function and information selected usable by a user.

22. (new) The apparatus as claimed in claim 21, wherein only functions related to business are usable by the user when the business mode is indicated.

23. (new) The apparatus as claimed in claim 21, wherein only information related to business is displayed when the business mode is indicated.

24. (new) The apparatus as claimed in claim 21, wherein the information includes telephone numbers, and the functions include dialing one of the telephone numbers.

25. (new) The apparatus as claimed in claim 6, wherein the detector detects the using situation to be a business mode when the position information is determined to be within a business zone.

26. (new) The apparatus as claimed in claim 21, further comprising:
a mobile telephone including the managing unit, the switch and the control unit.
